

Position: DBA (Oracle . SQL Server , MY SQL)

Location: Silom 19 Building

Job Description

- Install and test MySQL database management system in AWS RDS cloud environment.
- Map out the conceptual design for a planned database.
- · Consider both back-end organization of data and front-end accessibility for end-users
- Refine the logical design so that it can be translated into a specific data model
- Establish the needs of users and monitoring user access and security
- Monitor performance and manage parameters in order to provide fast responses to front-end users
- Write database documentation, including data standards, procedures and definitions for the data dictionary (metadata).
- Manage security, control access permissions and privileges.
- Develop, manage and test back-up and recovery plans.
- Ensure that storage and archiving procedures are functioning correctly.
- Work closely with back-end commerce developers, infrastructure and DevOps.
- · Communicate regularly with technical, applications and operational staff to ensure database integrity and security.
- Maintain data standards, including adherence to the Data Protection Act.

Qualifications

- Bachelor's degree in computer engineering or equivalent.
- 3+ years of experience in database administration.
- Problem-solving and good analytical skills.
- · Communication, teamwork and negotiation skills.
- Familiarity with SQL and the principles of database design.
- · The ability to create and maintain strong working relationships with colleagues and customers.
- Business awareness and understanding of business requirements.
- Self-motivated to keep up to date with developments in new technology.
- A commitment to continuing professional development (CPD).
- An understanding of information legislation, such as the Data Protection Act.
